Suc on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Mon Aug 30 16:10:12 1999; MasPar time 14.42 Seconds 923.239 Million cell updates/sec

Tabular output not generated. Title:

Description: Perfect Score: >US-09-120-044-4 (1-471) from US09120044.pep 3127 1 MANKAVNDFILAMNYDXXKL.....TISIWGTTLYPQVEDKVEND 471

Scoring table: PAM 150 Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 51.211; Variance 95.336; scale 0.537

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: SULFHYDRYL-ACTIVATED TOXIN. IS ABLE TO LYSE CHOLESTEROL CONTAINING MEMBRANES. CAN BE REVERSIBLY INACTIVATED BY OXIDATION. CHOLESTEROL IS THE RECEPTOR FOR THE BINDING OF THESE TOXINS TO EUKARYOTIC CELL MEMBRANES (BY SIMILARITY).

-!- FUNCTION: HEMOLYTIC ACTIVITY AGAINST RED BLOOD CELL.

-!- SIMILARITY: BELONGS TO THE THIOL-ACTIVATED CYTOLYSIN FAMILY.

Statistics: Mean 49.293; Variance 92.130; scale 0.535

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Streptococcus pyogenes. Streptococcus pyogenes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcus pyogenes infection claim 17; Fig 2; 80pp; English.

The sequence represents a soluble variant of Streptolysin O (SLO) having no haemolytic activity. The variant SLO can specifically recognise wild-type anti-SLO antibodies (ASO) but has no haemolytic activity. It can be used for the determination of previous and/or current infection by Streptococcus pyogenes. It enables ASO assays to become commercially viable and avoids the risk of handling haemolytically active S. pyogenes wild-type SLO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptolysin O variants produced by recombinant DNA technology having no haemolytic activity and recognised by wild-type anti-streptolysin O antibodies, useful in diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI;

Claim 7; Fig 2; 60pp; English.
The sequence is that of a soluble deriv. of Streptolysin O
with haemolytic properties which was obtd. from Streptococcus pyogenes
genomic library clone rSLO.3. It is useful in immunodiagnostic assays
which rely upon, e.g. the haemolytic properties of wild type
Streptolysin O. Recombinant Streptolysin O is obtd. more cheaply
than purified Streptolysin O obtd. from Streptococcus pyogenes.

The SLO derivative contains no cysteine residues, with cytolytic activity giving resistance to inactivation by oxidation or thiol groups. Abs raised to the SLO may be used in the dection and diagnosis of Streptococcus pyogenes infection.
